

● PUBLISHER ONE-PAGER · SDK MONETIZATION

Turn idle bandwidth into dependable app revenue.

A consent-first SDK that pays you for opted-in devices — **no ads, no UX cost, no personal data collected.**

Orion Data Services helps app developers earn a new revenue stream from unused bandwidth. Users opt in through a clear consent screen; you get paid monthly for every opted-in daily active device.

HOW IT WORKS

- 01 Integrate**
Drop the lightweight Orion SDK into your app; most teams ship it in about a day.
- 02 Ask**
Users see a plain-language consent screen offering value you define in exchange for sharing unused bandwidth.
- 03 Earn**
Get paid monthly for opted-in daily active devices, with full visibility into what your users are generating.

WHY ORION

- ✦ **Stacks with everything**
Runs alongside ads, IAP and subscriptions — additive, not competitive.
- ✦ **Invisible to UX**
No banners, no interstitials, no interruptions to your product.
- ✦ **Zero personal data**
The SDK collects no identity, browsing history, or content — ever.
- ✦ **Compliance-minded**
Designed around GDPR and CCPA expectations, with one-tap opt-out built in.

What your users see: one clear screen — share unused bandwidth in exchange for the value you choose: premium features, an ad-free tier, or rewards. They can decline or opt out anytime, with zero personal data ever collected.

Support this app

Share unused bandwidth to unlock Premium. No personal data ever leaves your device.
